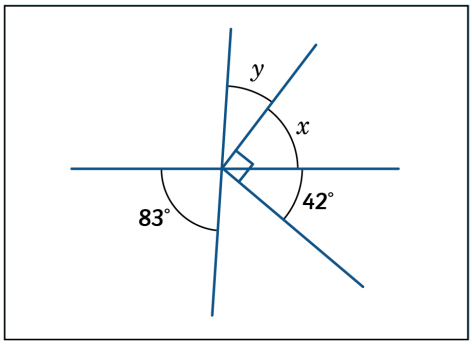
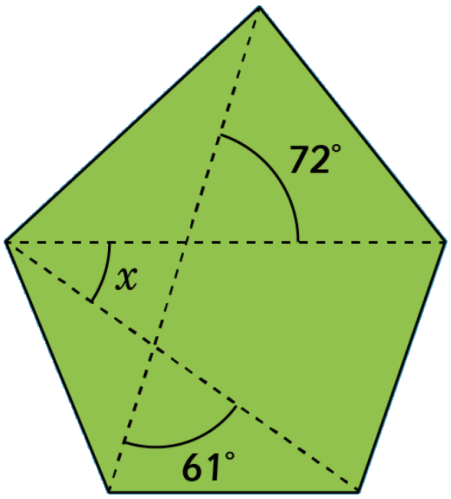
Recognise vertically opposite angles

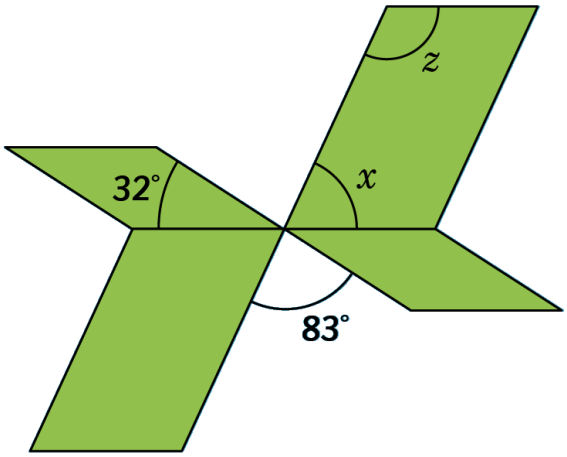
Extra Spicy

How many degrees is angle x?

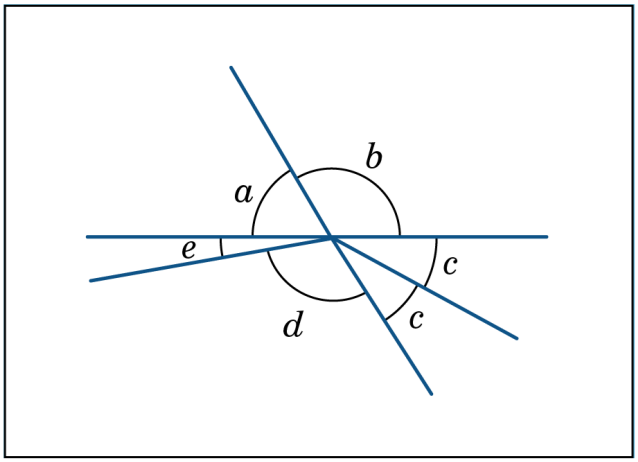
Angle y measures_____







The image shows four parallelograms arranged so that their sides make three straight lines crossing at the same point. How many degrees is angle z?

Use the following clues to find the size of angle d in degrees:


- angles a and b are on a straight line.
- angle b is twice the size of angle a.
- angle c is twice the size of angle e.
