Highlight all of the multiples of 2 on the 100 square. What patterns do you see?

If I start on 73, can I count in 2's? How do you know?

Finish the following sequences by counting in 2s:

11, __, __, __

89, __, __, __

Over on the next page are some true or false questions. Read the questions and work out the answer to determine whether they are true or false. Then you need to prove what you think by drawing it and writing down your rationale.

True or false?

1. Rosie has 10 robot feet parts. If she fixes 5 robots each robot can have 2 feet.

True or false? How do you know?

2. Rosie had fixed 4 robots who each have 2 feet. So Rosie has fixed 10 feet all together.

True or false? How do you know?

3. Rosie has 10 robots to fix. She orders 20 feet that way every robot gets 2 feet and there will be 2 spare.

True or false? How do you know?
