UCPS ZOO

We hope that you all had fun yesterday and found out some new facts! Today anything is possible and you will be one step closer to the opening of your zoo!

Today you will become architects and start to design plans for the creation of your new ethical zoo. Think BIG! We were amazed by Guangzhou Zoo in southern China, which has just become the world's first VR (virtual reality) zoo. You can create these in any way that you would like! (3D model, painting, drawing, mood board of images). Remember that you must consider how much space each animal is going to need? Will they be living alone? Or with other animals? How many animals will be kept together? And how can you ensure that the animals are happy? Your extra spicy three chilli challenge is to add length, width and height measurements to your creations .
